

FUNCTIONAL AND NON-FUNCTIONAL REQUIREMENTS

To develop an information system for keeping records of innovations at z-hub, it is important to consider both functional and non-functional requirements.

Functional requirements define what the system should do, while Non-functional requirements specify how the system should perform. Therefore the following are comprehensive list of both types of requirements for the information system:

GROUP 11

MISHECK .C .MWICHE SIN: 22104657
CHEWE KANGWA SIN: 22108870
MAURICE BANDA SIN: 22107084
RICHARD CHIYANTA SIN: 22111404
CHARLES .M .CHIBESA SIN: 22111765
Moses sikaonga sin: 22103543

FUNCTIONAL REQUIREMENT

NO	NAME OF REQUIREMENT	DESCRIPTION	PRIORITY (MoSCoW)
1.	User Registration	The system should allow innovators to register their details.	Must have
2.	Innovation Submission	Innovators should be able to submit details about their innovations.	Must have
3.	Document Management	The system should provide a platform for innovators to upload supporting documents such as prototypes.	Must have
4.	Review Process	The system should facilitate a review process where experts can evaluate the submitted innovations.	Must have
5.	Collaboration	The system should enable innovators to collaborate with other stakeholders, such as mentors or supervisors.	Should have
6.	Progress Tracking	Innovators should be able to track the progress of their innovation through different stages of development and commercialization.	Should have
7.	Reporting and Analytics	The system should provide analytics and reporting capabilities to generate, success rates, and other relevant metrics.	Could have
8.	Notifications	The system should send notifications to inform innovators about important updates or deadlines related to their innovations.	Must have
9.	Integration with External Systems	The system should have the ability to integrate with external systems such as databases or APIs for seamless data exchange.	Must have

NON-FUNCTIONAL REQUIREMENTS.

NO	NAME OF REQUIREMENT	DESCRIPTION	PRIORITY (MoSCoW)
1	Security	The system should ensure the confidentiality, integrity, and availability of innovators' data by implementing appropriate security measures like encryption and access controls.	Must have
2	Scalability	The system should be able to handle a growing number of innovators and innovations without compromising performance.	Must have
3	Usability	The system should have an intuitive and user-friendly interface, allowing innovators to easily navigate and interact with the platform.	Must have
4	Reliability	The system should be reliable, minimizing downtime and ensuring that data is consistently available	Must have
5	Performance	The system should respond quickly to user actions, providing a seamless experience even during peak usage periods.	Must have
6	Compatibility	The system should be compatible with different devices and browsers to accommodate users with various preferences.	Must have
7	Maintainability	The system should be designed in a modular and extensible manner, making it easier to maintain, update, and add new features in the future.	Must have
8	Data Backup and Recovery	The system should regularly back up data and have mechanisms in place for data recovery in case of any unforeseen events or disasters	Must have
